

ABSTRACT

Disclosed are improvements in digital copier machines and methods for controlling an output job to issue onto a removable digital storage media. A drive unit is provided and configured to removably receive a removable digital storage medium such as an optical disc. A picker mechanism is configured to deliver the removable digital storage medium to the drive unit from a supply of a plurality of removable digital storage media in response to a load drive unit signal. A selector is provided on the interface and operational logic is provided which is responsive to a user selection of the selector to issue the load drive unit signal and to convey the digital data between the control unit of the digital copier machine and the drive unit.
